Exactly what the title says. I modeled a ring using the Shapeways custom ring webapp, but I'd like to have the .stl file to work manually off of. The webapp exports a .x3db file, so is there any way to convert it to an stl? Will something like Blender be able to open an x3db? Thanks!

Quote: Will something like Blender be able to open an x3db?

Yes - but you don't Open it (that's for native .blend files) you Import it (an option from the File drop-down).

You can also use netfabb Studio to convert this file format.

Ah yes, I had some issues with Blender but I see that NetFabb is x3db capable. Thanks a ton!
